ART SPA Wall panels

Read the instructions carefully before the installation of the wall panels
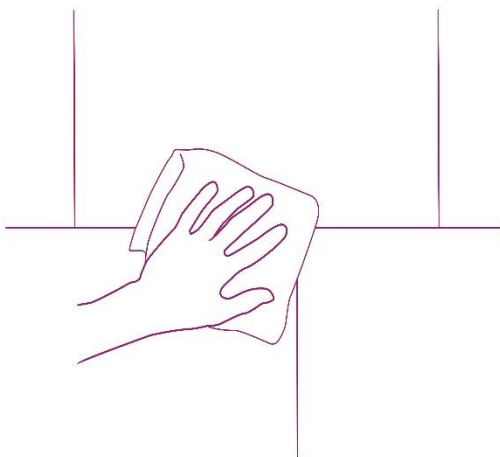

Before installation

Storage

- To avoid deformation in the product, it has to be collocated in a horizontal way.

NB: More instructions on how to install panels in wet spaces can be found at the end of the page
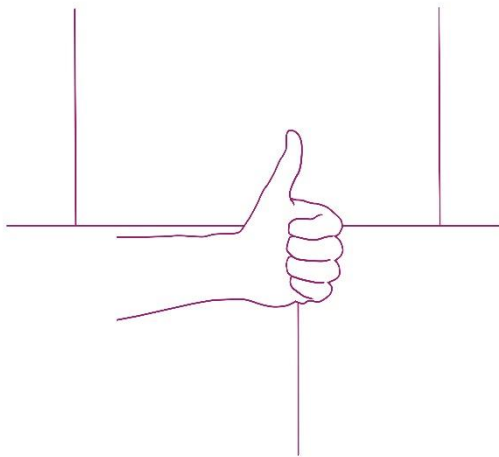

Background

Clean the surface

- Be sure that the surface is clean and out of greases.

**MALER**

Quality to Finishing

Preparation of the wall

• ART SPA Wall panels can be installed directly on many surfaces. However, if your wall is porous (concrete, plaster, wood...) we recommend the application of a primer to obtain the best fixation in the wall.
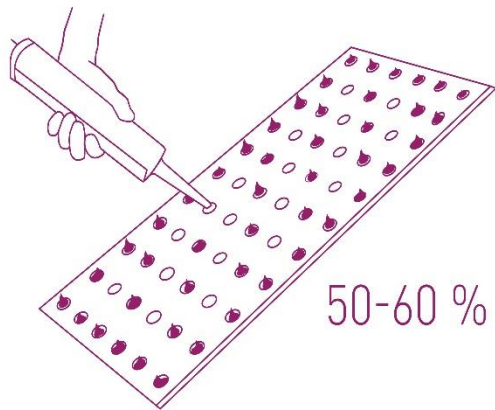

Wall perfect to start working

• If your wall is not porous (because is not concrete, plaster, wood...), it is ready to start working.
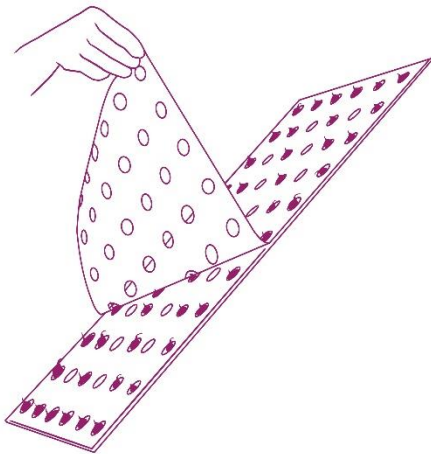

Installation

Mark the center of the wall

• Mark horizontally and vertically the center, you will obtain 4 angles of 90º, this will help to have a reference to put the first tile.

MALER

Quality to Finishing

Apply the installation glue

• Each tile has an adhesive foam with holes for the installation glue to get the optimum adherence. It is recommended to apply installation glue in the 50% or 60% of the holes.
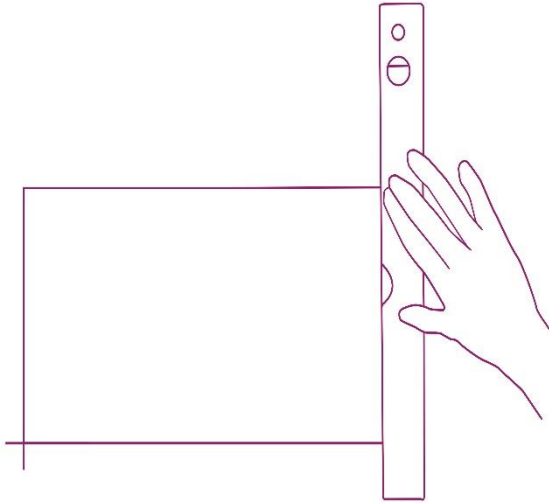

50-60 %

Remove the protector film

• Take off the auto-adhesive protector paper to stick the tile over the wall.
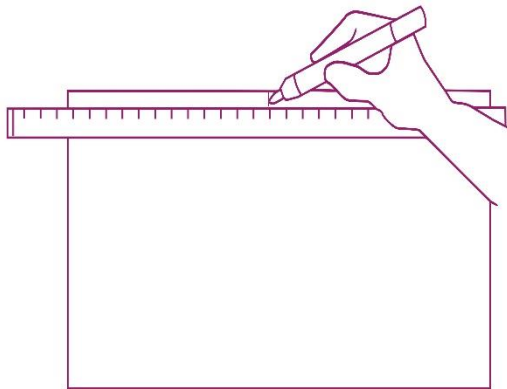

Stick the tile

• Collocate the first tile in one of the corners of the marked cross in the center of the wall. Apply during a few seconds a light pressure in the tile from the exterior to the center to get stacked.
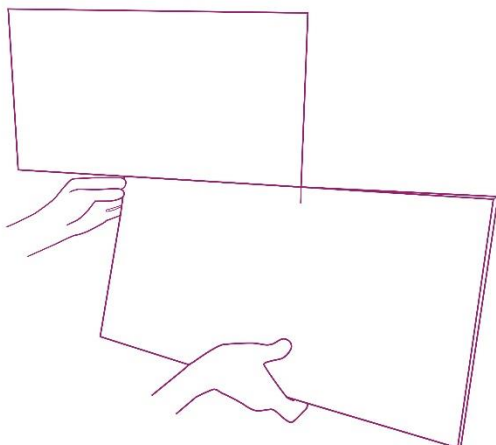

MALER   ART   **smart**   SPA

Verify that the tile is alienated

- Check with a leveler that the first tile is alienated with the center.
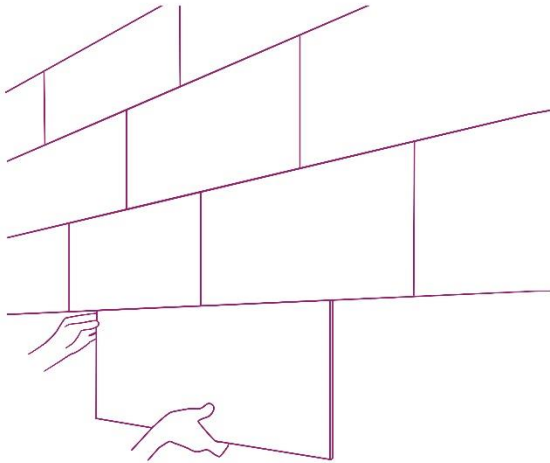

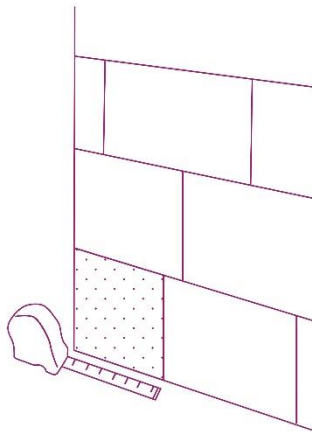

Mark the center of the following tile

Collocate the following tile alienated with the center of the wall

- Using the center marked cross and the first tile to get oriented, stick the tile below the first one.

Quality to Finishing

Collocate the following tiles
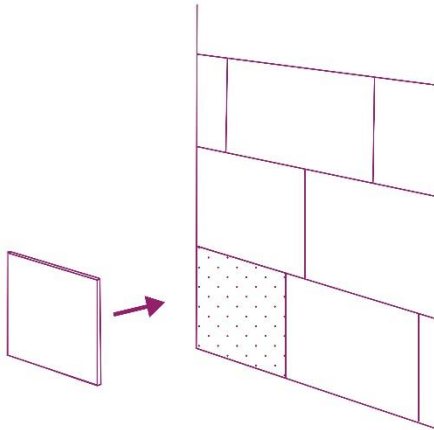

Measure the necessary cut

- When installing the last tile, measure the cutting point of the piece of tile needed on the wall.

Cut the excess with a cutter

- Using a regular tile, mark the space necessary and cut the excess of the tile just with a cutter
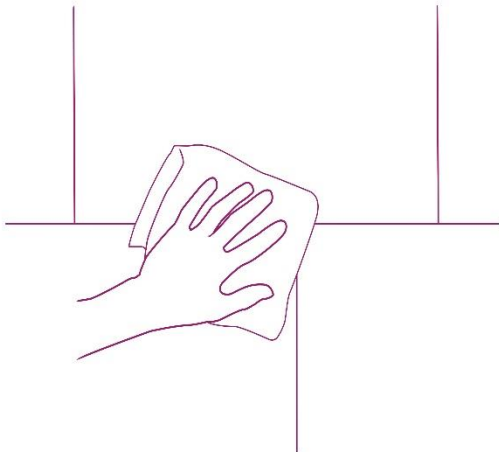

MALER   ART   **smart**   SPA

MALER

*Quality to Finishing*

Collocate the cut tile

- Apply installation glue to the holes on the backing and stick the cut tile on the corner.

Shower installation
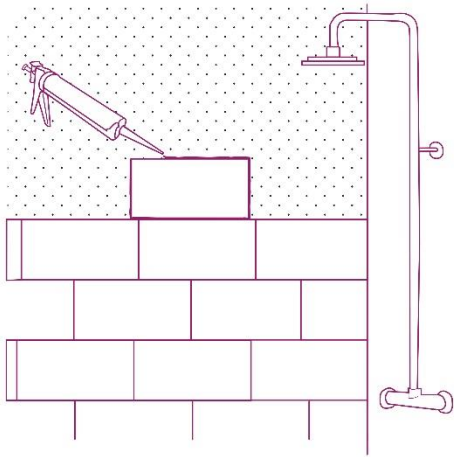

Clean the surface

- Clean it with alcohol and be sure that the surface is clean and out of greases.

Apply sealant silicone

- Apply sealant silicone around the perimeter of each tile before its installation.

MALER ART **smart** SPA™

Remove excess

- Remove the excess silicone with the finger
